#### Lab04

# a. Member "getMember ( String username )" ใช้ดึงข้อมูลสมาชิกตาม username

```
26⊝
        public Member getMember(String username) throws SQLException {
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47
48
             PreparedStatement usn = con.prepareStatement("SELECT * FROM member WHERE username = ?");
             usn.setString(1, username);
             //execute command
            ResultSet rs = usn.executeQuery();
            if(rs.next()) { //ถ้าพบซ้อมูล
                Member mb = new Member();
                 mb.setUsername(rs.getString("username"));
                 mb.setPassword(rs.getString("password"));
                 mb.setName(rs.getString("name"));
                 mb.setAddress(rs.getString("address"));
                 mb.setMobile(rs.getString("mobile"));
                 mb.setEmail(rs.getString("email"));
                 return mb;
             else {
                 return null;
        }
```

```
11 //ดีงจากชื่อ
12 MemberDAO dao = new MemberDAO();
13 Member rs = dao.getMember("somsak");
14 System.out.println("ซื่อผู้ใช้: "+rs.getUsername()+" ซื่อ: "+rs.getName()+" ที่อยู่: "
15 +rs.getAddress()+" พอร์: "+rs.getMobile()+" อีเมล: "+rs.getEmail());
16
```

### ผลรัน

```
    Markers □ Properties ฟ Servers   Snippets   Terminal □ Console ×
```

# b. ArrayList<Member> "getAllMember( )" ใช้ดึงข้อมูลสมาชิกทั้งหมด

```
51 //
         .
ดึงข้อมูลทั้งหมด
 52⊝
         public ArrayList<Member> getAllMember() throws SQLException{
 53
             PreparedStatement all = con.prepareStatement("SELECT * FROM member");
 55
             ResultSet rs = all.executeQuery();
 56
 57
             ArrayList<Member> membersList = new ArrayList<>();
 58
 59
 60
             while (rs.next()) { //ถ้าพบข้อมูล
 61
                Member allmb = new Member();
 62
                allmb.setUsername(rs.getString("username"));
 63
                 allmb.setPassword(rs.getString("password"));
                allmb.setName(rs.getString("name"));
 64
 65
                allmb.setAddress(rs.getString("address"));
 66
                 allmb.setMobile(rs.getString("mobile"));
 67
                 allmb.setEmail(rs.getString("email"));
 68
 69
                 membersList.add(allmb);
 70
             }
 71
                 return membersList;
 72
         }
19 //ดึงชื่อทั้งหมด
20
           MemberDAO daogetall = new MemberDAO();
21
           ArrayList<Member> members = daogetall.getAllMember();
22
           for (Member m:members) {
23
               System.out.println("ซื่อผู้ใช้: "+m.getUsername()+" ซื่อ: "+m.getName()+" ที่อยู่: "
24
25
26
           +m.getAddress()+" พอร์: "+m.getMobile()+" อีเมล: "+m.getEmail());
```

### ผลรัน

# c. void "createMember ( Member member )" ใช้เพิ่มข้อมูลสมาชิกในฐานข้อมูล

```
public void createMember (Member member) throws SQLException {

PreparedStatement ismb = con.prepareStatement("INSERT INTO member (username, password, name, address, mobile,email) VALUES (?, ?, ?, ?, ?)");

ismb.setString(1, member.getUsername());

ismb.setString(3, member.getSasword());

ismb.setString(3, member.getAddress());

ismb.setString(4, member.getAddress());

ismb.setString(6, member.getEmail());

ismb.setString(6, member.getEmail());

ismb.setString(6, member.getEmail());

ismb.setString(6, member.getEmail());

ismb.setString(6, member.getEmail());

ismb.setString(6, member.getEmail());

system.out.println("Created success");

}

else {

System.out.println("Failed Created");
}

}

else {

System.out.println("Failed Created");
}

}
```

```
28 //insert@upa
29 MemberDAO daoinsert = new MemberDAO();
30 Member mbis = new Member "aoyjai", "1245", "##ss #OUMDON", "127 nct", "06-4096-0794", "aoyjai@nct.com");
31 daoinsert.createMember(mbis);
32 daoinsert.closeCon();
33
```

## ผลลัพธ์

# d. void "updateMember ( Member member )" ใช้แก้ไขข้อมูลสมาชิก

```
35 //แก้ไขข้อมูก
36 MemberDAO daoupdate = new MemberDAO();
37 Member mbup = new Member("aoyjai","1245", "ตลิธร พา", "nctdream", "06-4096-0791", "aoyjai@nctdm.com");
38 daoupdate.updateMember(mbup);
39 daoupdate.closeCon();
```

### ผลลัพธ์

# e. void "deleteMember ( String username )" ใช้ลบข้อมูลสมาชิก

```
42 //ลบข้อมูล
43 MemberDAO daodelete = new MemberDAO();
44 daodelete.deleteMember("aoyjai");
45 daodelete.closeCon();
46
47
```

## ผลลัพธ์
